SUMMARY

Software engineer with 3+ years building and shipping production systems end to end, across backend, frontend and infrastructure. Founding engineer at Mando, taking enterprise products from first commit to paying customers. Previously two years on real-time trading systems at Quantitative Brokers, working to hard latency and reliability budgets.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, Java, SQL
Frontend: React, Next.js, Angular, Astro, Tailwind CSS, Three.js
Backend: FastAPI, Node.js, NestJS, SQLAlchemy, REST APIs, WebSockets, Stripe
AI / ML: LLM applications, Retrieval-Augmented Generation (RAG), Vector search, pgvector, Model Context Protocol (MCP)
Databases: PostgreSQL, Redis, MongoDB, Alembic
Cloud & DevOps: Amazon Web Services (AWS), Microsoft Azure, Terraform, Docker, GitHub Actions, CI/CD, Vercel
Tools: Git, Playwright, Chrome Extensions, Shell scripting, Jira

WORK EXPERIENCE

Mando

Sep 2024 - Present

Remote

Founding Software Engineer

- Built natural language search and a conversational AI interface over Workday's knowledge base
- Shipped a Jira/Zendesk-style service management platform: ticket intake, routing, assignment, resolution
- Built a video call system on Azure Communication Services with a time-zone-aware booking flow for expert sessions
- Integrated Stripe end to end for subscriptions, checkout, invoicing and webhook-driven entitlement
- Built a browser-based video/image editor and a Chrome extension that turns recordings into step-by-step docs

Quantitative Brokers

Jul 2022 - Sep 2024

Software Engineer

Chennai, India

- Designed an order monitoring system handling 200 messages/sec of 800-1000 bytes from multiple upstream sources
- Cut application load time from ~40 seconds to under 1 second by moving data loading server-side
- Reduced latency by 20% and CPU usage by 50% on the critical path of the order entry application
- Implemented DV01-based risk calculations for CASH instruments, improving cash stream revenue by 5%

Quantitative Brokers

May 2021 - Jul 2021

Software Development Intern

Chennai, India

- Built a desktop integration prototype with OpenFin, sharing context across four separate applications
- Developed an Angular app plotting financial curves from a live kdb+ database using Highcharts

Earlier: Android developer at Prescribe (2021); software development intern at Workfence Technologies (2020).

PROJECTS

leak - Terminal Subscription Manager github.com/RishikeshSreekumar/leak

Go, Bubble Tea, SQLite, GitHub Actions

- Built a local-first terminal app that tracks and audits recurring subscriptions, shipped as a single Go binary
- Shipped a Homebrew tap, install script and semver releases: macOS, Linux, Windows on amd64 and arm64

deadfall - Dead Component Detector (npm) npmjs.com/package/deadfall

TypeScript, Node.js, ts-morph

- Published an npm CLI that maps a Next.js codebase into a component usage graph and flags unused components
- Exits non-zero on dead code so it doubles as a CI gate, and generates an interactive HTML report for exploring the graph

Rubik's Cube Solver

Next.js, Three.js, Web Workers, PWA

- Built a browser solver running Kociemba's two-phase algorithm in a Web Worker, with webcam cube scanning
- Validates cube state and rejects impossible cubes with a specific reason, not a generic failure

EDUCATION

Indian Institute of Technology, Madras

2018 - 2022

B.Tech, Chemical Engineering

Chennai, India | CGPA 8.58 / 10

Achievements: All India Rank 2275 in JEE Advanced 2018 (top 0.2% of ~1.6 million candidates); All India Rank 5 in KEAM 2018.
