Summary

Full-stack software engineer with **4+ years** shipping production systems end to end. Founding engineer at Mando, an AI platform for Workday customers, taking **five product surfaces** from first commit to the company's **first paid tier** in under two years. Previously built real-time trading systems at Quantitative Brokers under strict latency budgets.

Work Experience

Founding Software Engineer

Sep 2024 – Present

Mando

Remote

- Engineered **conversational search** over Workday's knowledge base, owning retrieval, ranking and **cited answer generation (RAG)**, so users get a verifiable answer, not a list of documents.
- Shipped the **expert consultation product** end to end: time-zone-aware booking, live video and recording on Azure Communication Services, and a browser-based editor for trimming and annotating footage.
- Built the **service-management platform** behind it (ticket intake, routing, expert assignment, resolution) and a **Chrome extension** that records a workflow once and generates step-by-step documentation from it.
- Launched Mando's **first paid tier** by integrating Stripe subscriptions, checkout, invoicing and entitlements.
- Architected the full stack as sole engineer: **Next.js** and **FastAPI** on **PostgreSQL**, with development, staging and production environments defined in **Terraform**.

Software Engineer

Jul 2022 – Sep 2024

Quantitative Brokers

Chennai, India

- Designed a **real-time order monitoring system** processing **200 messages/sec** from multiple upstream sources into live aggregates and market data ladders for trading analysts.
- Cut risk control load time by **over 97%** (40 s to under 1 s) by moving data loading server-side and paginating.
- Reduced critical-path latency by **20%** and CPU usage by **50%** in a C# WPF order entry app consuming Bloomberg market data.
- Implemented **DV01** risk calculations for cash instruments, enabling the desk to expand its cash trading stream.

Software Development Intern, Quantitative Brokers — OpenFin interop; Angular curve plotting over kdb+

May 2021 – Jul 2021

Android Developer, Prescribe — Firebase-backed patient intake app

Feb 2021 – May 2021

Software Development Intern, Workfence Technologies — Geofencing attendance system for 100,000 users

May 2020 – Jul 2020

Projects

leak — Terminal Subscription Manager

github.com/RishikeshSreekumar/leak

Go, Bubble Tea, SQLite, GitHub Actions

- Built a **local-first terminal app** that tracks and audits recurring subscriptions as a **single static Go binary**.

deadfall — Dead Component Detector

npmjs.com/package/deadfall

TypeScript, Node.js, ts-morph, npm

- Published an **npm CLI** that maps a Next.js app's component usage graph and flags components nothing renders.

Technical Skills

Languages: TypeScript, JavaScript, Python, Go, C#, Java, SQL

Frontend: React, Next.js, Angular, SvelteKit, Astro, Tailwind CSS, Three.js, WPF

Backend: FastAPI, SQLAlchemy, Node.js, NestJS, .NET, REST APIs, WebSockets, Stripe

Applied AI: LLMs, Retrieval-Augmented Generation (RAG), vector search, pgvector

Databases: PostgreSQL, Redis, SQLite, kdb+

Cloud & DevOps: Amazon Web Services (AWS), Microsoft Azure, Terraform, Docker, GitHub Actions, CI/CD, Vercel

Education

Indian Institute of Technology Madras

2018 – 2022

Bachelor of Technology (B.Tech.), Chemical Engineering | CGPA: 8.58/10

Chennai, India
