SUMMARY

Full-stack engineer with **4+ years** in production. Sole founding engineer at Mando, taking **five AI products** for Workday customers from first commit to **first paid tier**; before that, low-latency trading systems at Quantitative Brokers.

EXPERIENCE

Mando

Founding Software Engineer

Remote

Sep 2024 – Present

- Architected the stack as sole engineer: **Next.js** and **FastAPI** on **PostgreSQL**, all environments in **Terraform**.
- Engineered **conversational search** over Workday's knowledge base, owning retrieval, ranking and cited answer generation (**RAG**), so users get a verifiable answer instead of a list of documents.
- Shipped an **expert consultation product** end to end: time-zone-aware booking, live video and recording on Azure Communication Services, and a browser-based editor for trimming and annotating footage.
- Built the **service-management platform** behind it (ticket intake, routing, expert assignment, resolution) and a **Chrome extension** that records a workflow once and generates step-by-step documentation.
- Launched Mando's **first paid tier** by integrating Stripe subscriptions, checkout, invoicing and entitlements.

Quantitative Brokers

Software Engineer

Chennai, India

Jul 2022 – Sep 2024

- Designed a **real-time order monitoring system** processing **200 messages/sec** from multiple upstream sources into live aggregates and market data ladders for trading analysts.
- Cut risk control load time by **over 97%** (40s to under 1s) by moving data loading server-side and paginating.
- Reduced critical-path latency by **20%** and CPU usage by **50%** in a C# WPF order entry app on Bloomberg data.
- Implemented **DV01** risk calculations for cash instruments, enabling the desk to expand its cash trading stream.

Software Development Intern, *Quantitative Brokers* — OpenFin interop, kdb+ curve plotting *May 2021 – Jul 2021*

Android Developer, *Prescribe* — Firebase patient intake app *Feb 2021 – May 2021*

Software Development Intern, *Workfence* — Geofencing for 100,000 users *May 2020 – Jul 2020*

PROJECTS

leak | *Go, Bubble Tea, SQLite, GitHub Actions* github.com/RishikeshSreekumar/leak

- Built a **local-first terminal app** that tracks and audits recurring subscriptions, shipped as a **single static Go binary**.

deadfall | *TypeScript, Node.js, ts-morph* npmjs.com/package/deadfall

- Published an **npm CLI** that maps a Next.js app's component graph to flag dead components, doubling as a **CI gate**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, C#, Java, SQL

Frontend: React, Next.js, Angular, SvelteKit, Astro, Tailwind CSS, Three.js, WPF

Backend: FastAPI, SQLAlchemy, Node.js, NestJS, .NET, REST APIs, WebSockets, Stripe

Applied AI: LLMs, Retrieval-Augmented Generation (RAG), vector search, pgvector

Databases: PostgreSQL, Redis, SQLite, kdb+

Cloud & DevOps: Amazon Web Services (AWS), Azure, Terraform, Docker, GitHub Actions, CI/CD, Vercel

EDUCATION

Indian Institute of Technology Madras

Bachelor of Technology (B.Tech.), Chemical Engineering / CGPA: 8.58/10

Chennai, India

2018 – 2022
